

ISIS - Bug #4036

Ironac2isis not stacking error messages

2016-06-20 09:04 AM - Stuart Sides

Status:	Resolved	Software Version:
Priority:	Normal	
Assignee:	Adam Paquette	
Category:	Applications	
Target version:	FY17 Backlog	
Impact:	More detailed error messages returned for bad or erroneous keywords. Will return the generic message followed by the specific error.	
Description		
<p>The Ironac2isis app is not stacking error messages correctly. It is only reporting the last message thrown when it is checking the input labels to see if the correct keywords are available.</p> <p>I/O ERROR The PDS header is missing important keyword(s).</p> <p>This error should have other stacked before it, giving more details as to what keyword is not correct.</p> <p>Suggestion: Change the ISIS exception to use the call that starts with an other message, so they will stack correctly.</p>
